

Make smart medication choices with MedSavvy™

Ever scratched your head after seeing a pharmaceutical ad or getting a prescription from your doctor?

That's why MedSavvy is here. We go beyond the generic vs. brand-name debate with proactive analytics of pharmacy data, grades for medication effectiveness, cost information and more.

How it works

MedSavvy is an easy-to-use, mobile optimized website that empowers you to make informed decisions about your medications. With MedSavvy, you can:

- › **See a report-card-style grade for medications**—Our pharmacists carefully review scientific research before assigning a letter grade for effectiveness.
- › **Search by treatment or condition**—Information is available on more than 1000 treatments and 80 health conditions...and counting.
- › **View costs**—Health plan benefits are integrated to provide up-to-date cost information.
- › **Comparison shop**—Search results display medication names, grades, cost and more.
- › **Build a virtual medicine cabinet**—With Medicine Cabinet, users can store all their medication information in one place.
- › **Get expert advice**—We'll email you if data analytics shows you could benefit from a medication change. Plus, a confidential message to one of our pharmacists is just a few clicks away.*
- › **Hear from others**—MedSavvy users can post firsthand medication ratings and reviews. And SavvyTalk™ provides an instant community.
- › **Stay updated**—“Following” a treatment or condition makes it easy to keep up with changes. So do in-line alerts on recalls and generic options.
